DATA COLLECTION CHART

INTERVIEW WITH DOCTOR

- Doctor said that there are 3 types of dengue
- common dengue, bleeding dengue, shock dengue
- In the beginning patients get severe head ache rashes, body pain, joint pains.
- Conjunctivitis, severe bone pain, no appetite, weakness.
- Repeated fever
- Red Rashes found on the layer of skin.

CAUSES

- The disease is caused by virus and spread by mosquito named edes egyptes.
- The mosquitoes breed only in fresh water.
- The mosquitoes bite only in the day time
- Unhygienic conditions around the house due to garbage disposal
- Ignorance about the diseases.
- No proper arrangement to avoid mosquitoes

EFFECTS

- Because of high fever and body ache, patients become unconscious
- Bleeding from sensory organs, urine, stool, and blood vomiting
- Because of severe pain in the bone, people feel as though their bone is breaking so it is also called as break bone fever
- Extreme cases may cause death

TREATMENT

To control fever cold water packs should be kept.

To consume lots of liquids, like water, tender coconut ORS.

Taking nutritious and clean food.

- Using mosquito nets and repellents.

Keeping the locality clean

- Consoling the patients.
